New APCO/NENA QA/QI Standard for PSAPs

The new standard was published in April 2015 with the goal of helping PSAPs of all sizes to implement robust QA/QI programs, ensuring that call taking and radio dispatch are delivered at the highest possible level. The standard will make PSAP staff training more effective by continuously monitoring and reinforcing it.

Overview

The APCO/NENA QA/QI standard defines the recommended minimum components and best practices of a QA/QI program within a PSAP. It recommends minimum requirements for the evaluation and QA of call processing to ensure a consistent, effective, and efficient level of service.

- Starting point for any Easy to implement size agency Complete system for all call types No cost Voluntary (not mandatory) Vendor/product agnostic

QA Review Process Guidelines

77

6

5

8

- Review in the normal course of business:
 At least 2% of all calls for service
 When the 2% factor would not apply or be overly burdensome due to low or excessively high call volumes, agencies must decide on realistic levels of case review.
- All cases involving catastrophic loss and/or high-acuity events as soon as possible after the receipt of the call and/or following the radio dispatch or at least within 5 days.
- Any other call or event types as defined by your agency

З

It is highly recommended to thoroughly explain the QA process to PSAP staff to get their buy-in prior to implementing the program. It will be better accepted when you start out selecting calls or dispatches that have positive results so that telecommunicators do not become fearful of the QA process. Forms should mirror PSAP standard operating procedures. Remember to use the review process to recognize excellence as well as learning opportunities.

You'll need to determine the desired point value for each question. The more important the question, the larger the point value should be. Each category is scored separately based on the percentage of total points for that skillset.

A target for the total score for each evaluation should be at least 90%, though you may start lower such as at 75% and work up to this target over time, such as in steps of 2% or 5%. For telecommunicators with inadequate performance (i.e., poor customer service), you may want to use more frequent evaluation to determine patterns of improvement or further assistance needed.

2

3

5 6 7

QAEs Evaluate Incidents Independently

Not calibrating will undermine a QA program and most likely cause it to fail because consistency and fairness will be compromised.

Senior Management Selects Calltaking & Dispatching Incidents

QA evaluators need to be periodically assessed to ensure that they are being fair and that the calls are being scored consistently based on agreedupon interpretation of applicable protocols across all QAEs. It is therefore very important for senior management to periodically review QAE evaluations and to calibrate weekly at the beginning of the program and then move to bi-monthly or monthly if within the target SD point goal.

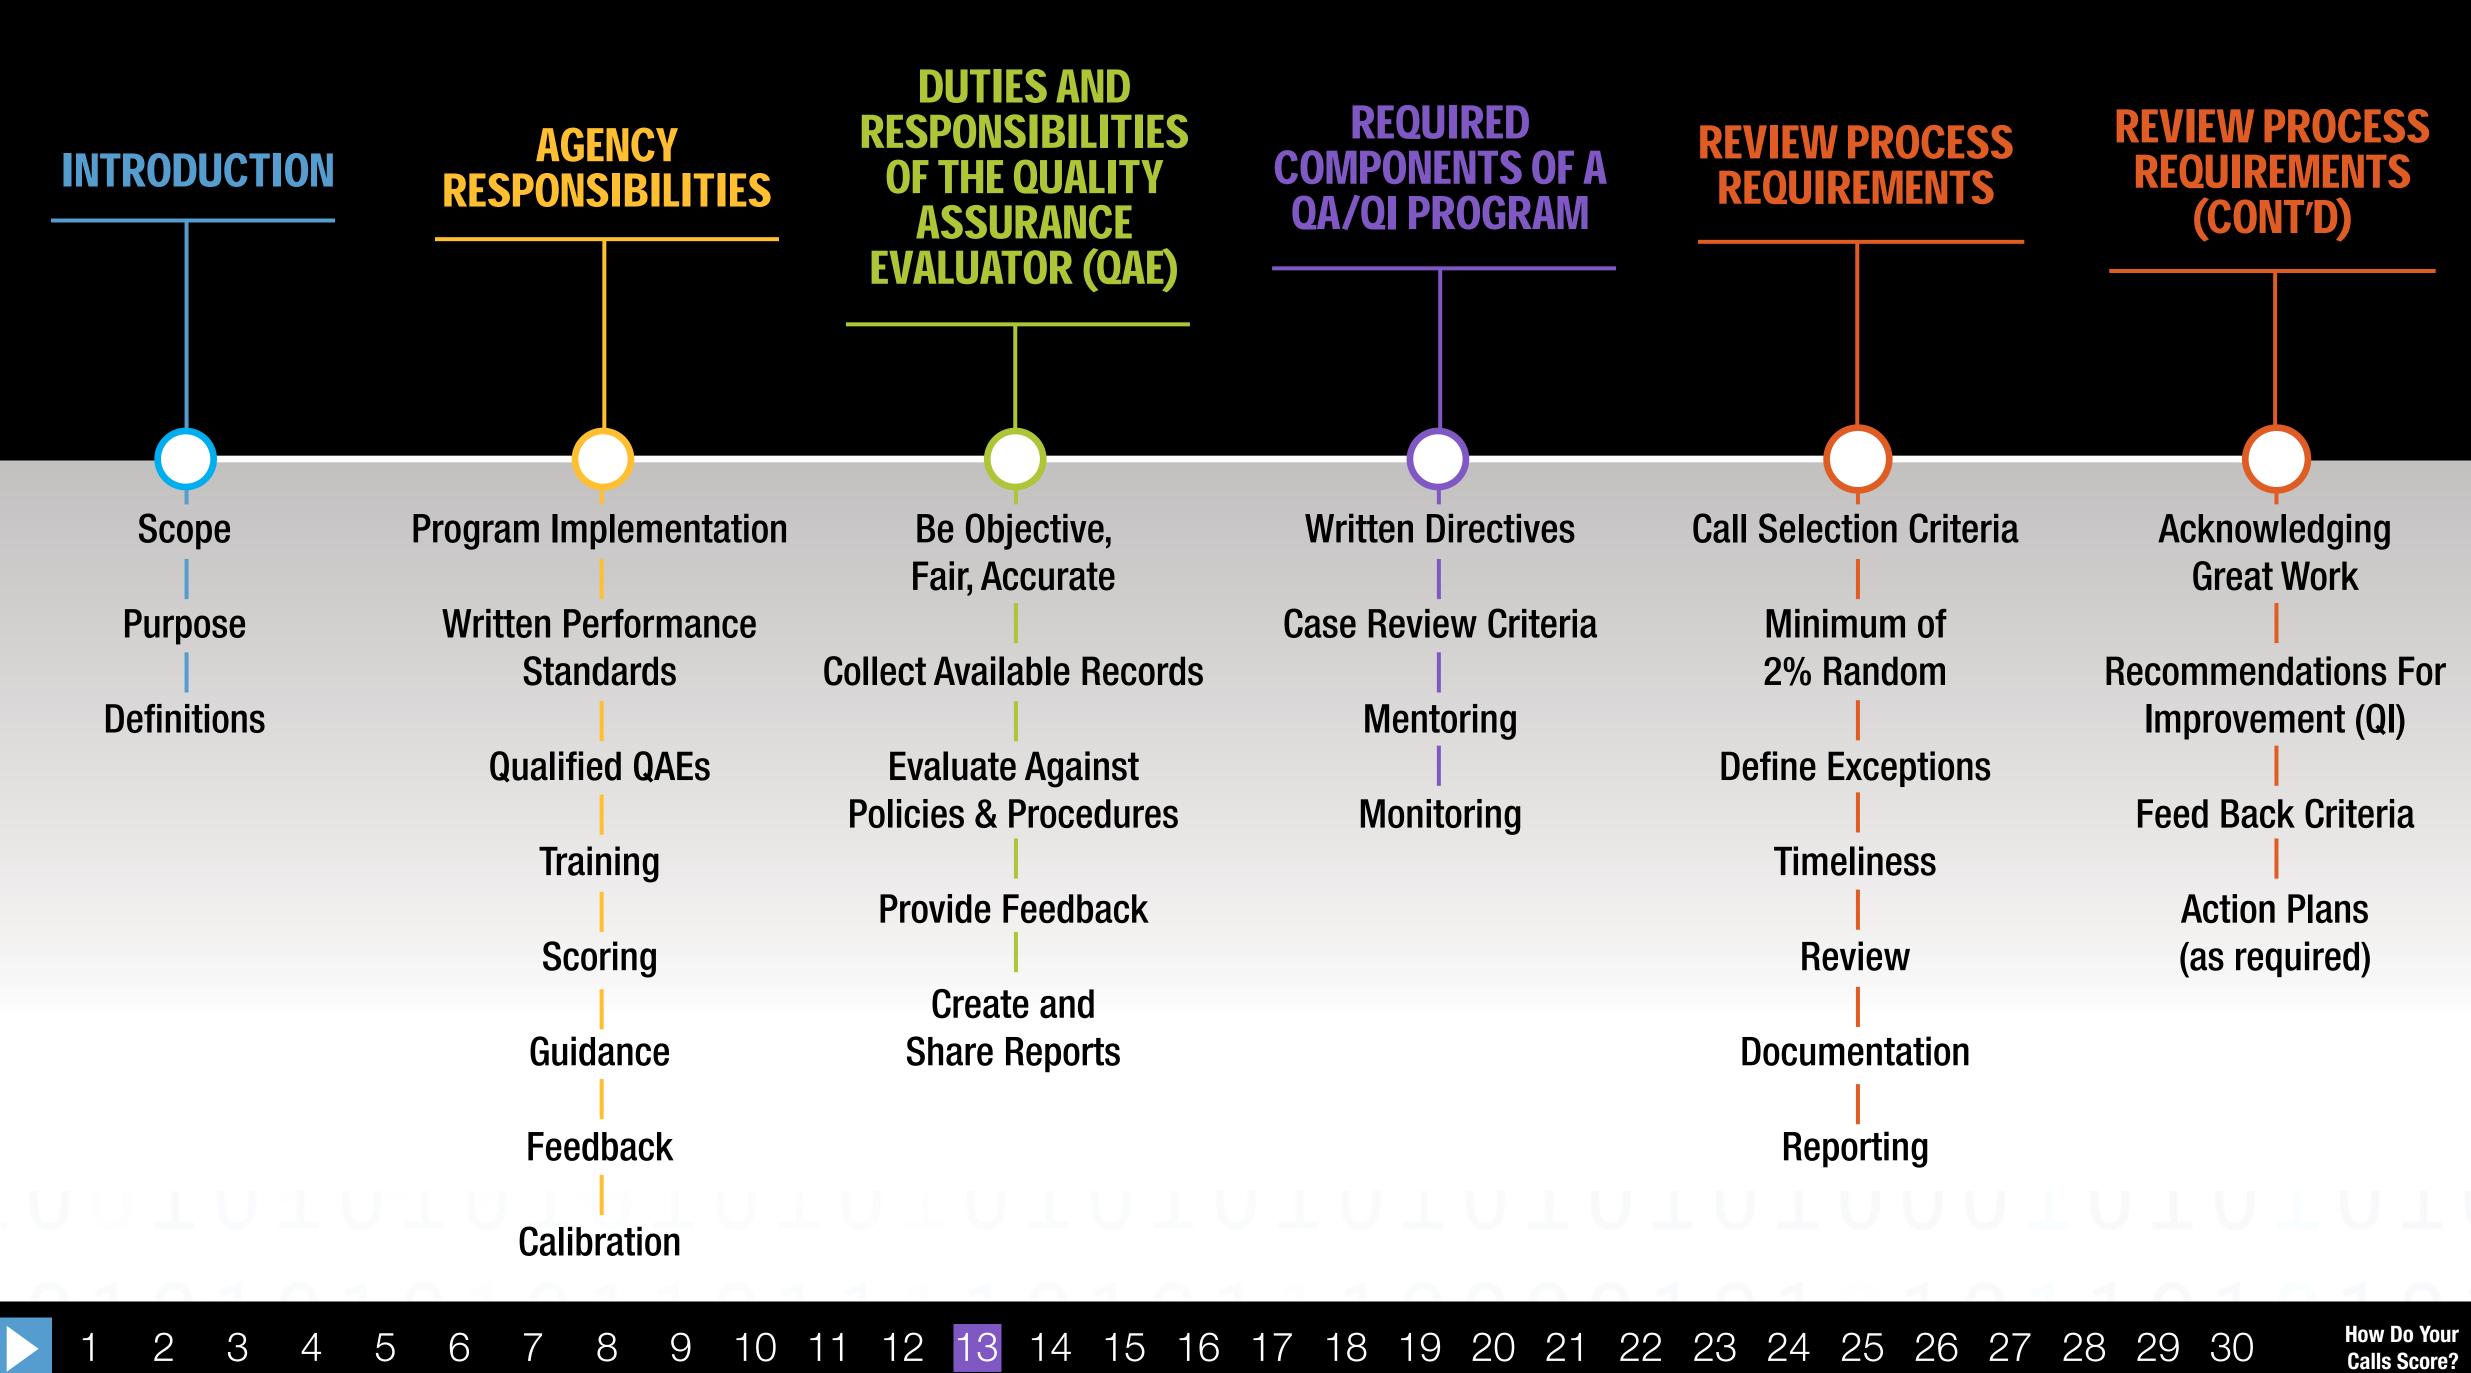

Senior management can select at least one call taking and one dispatching incident for review. Grade the incidents and then ask the evaluator(s) to do the same. If the scores do not match, discuss the discrepancies. Remind the evaluator(s) that there is no room for opinions or friendship discounts. The questions should be objectively answered with either "yes" or "no", not "sort of" or "maybe".

Implementation Overview

About the Fort Worth PSAP

Ft. Worth QA Program in 2015

In early 2015, the supervisors at the Ft. Worth PSAP were still filling out paper evaluation forms.

> They didn't have a tracking system to identify issues and so had no training efficiencies. They couldn't identify if just one person had an issue or if everyone had an issue so they ended up training everyone and spending a lot of extra time and money doing it.

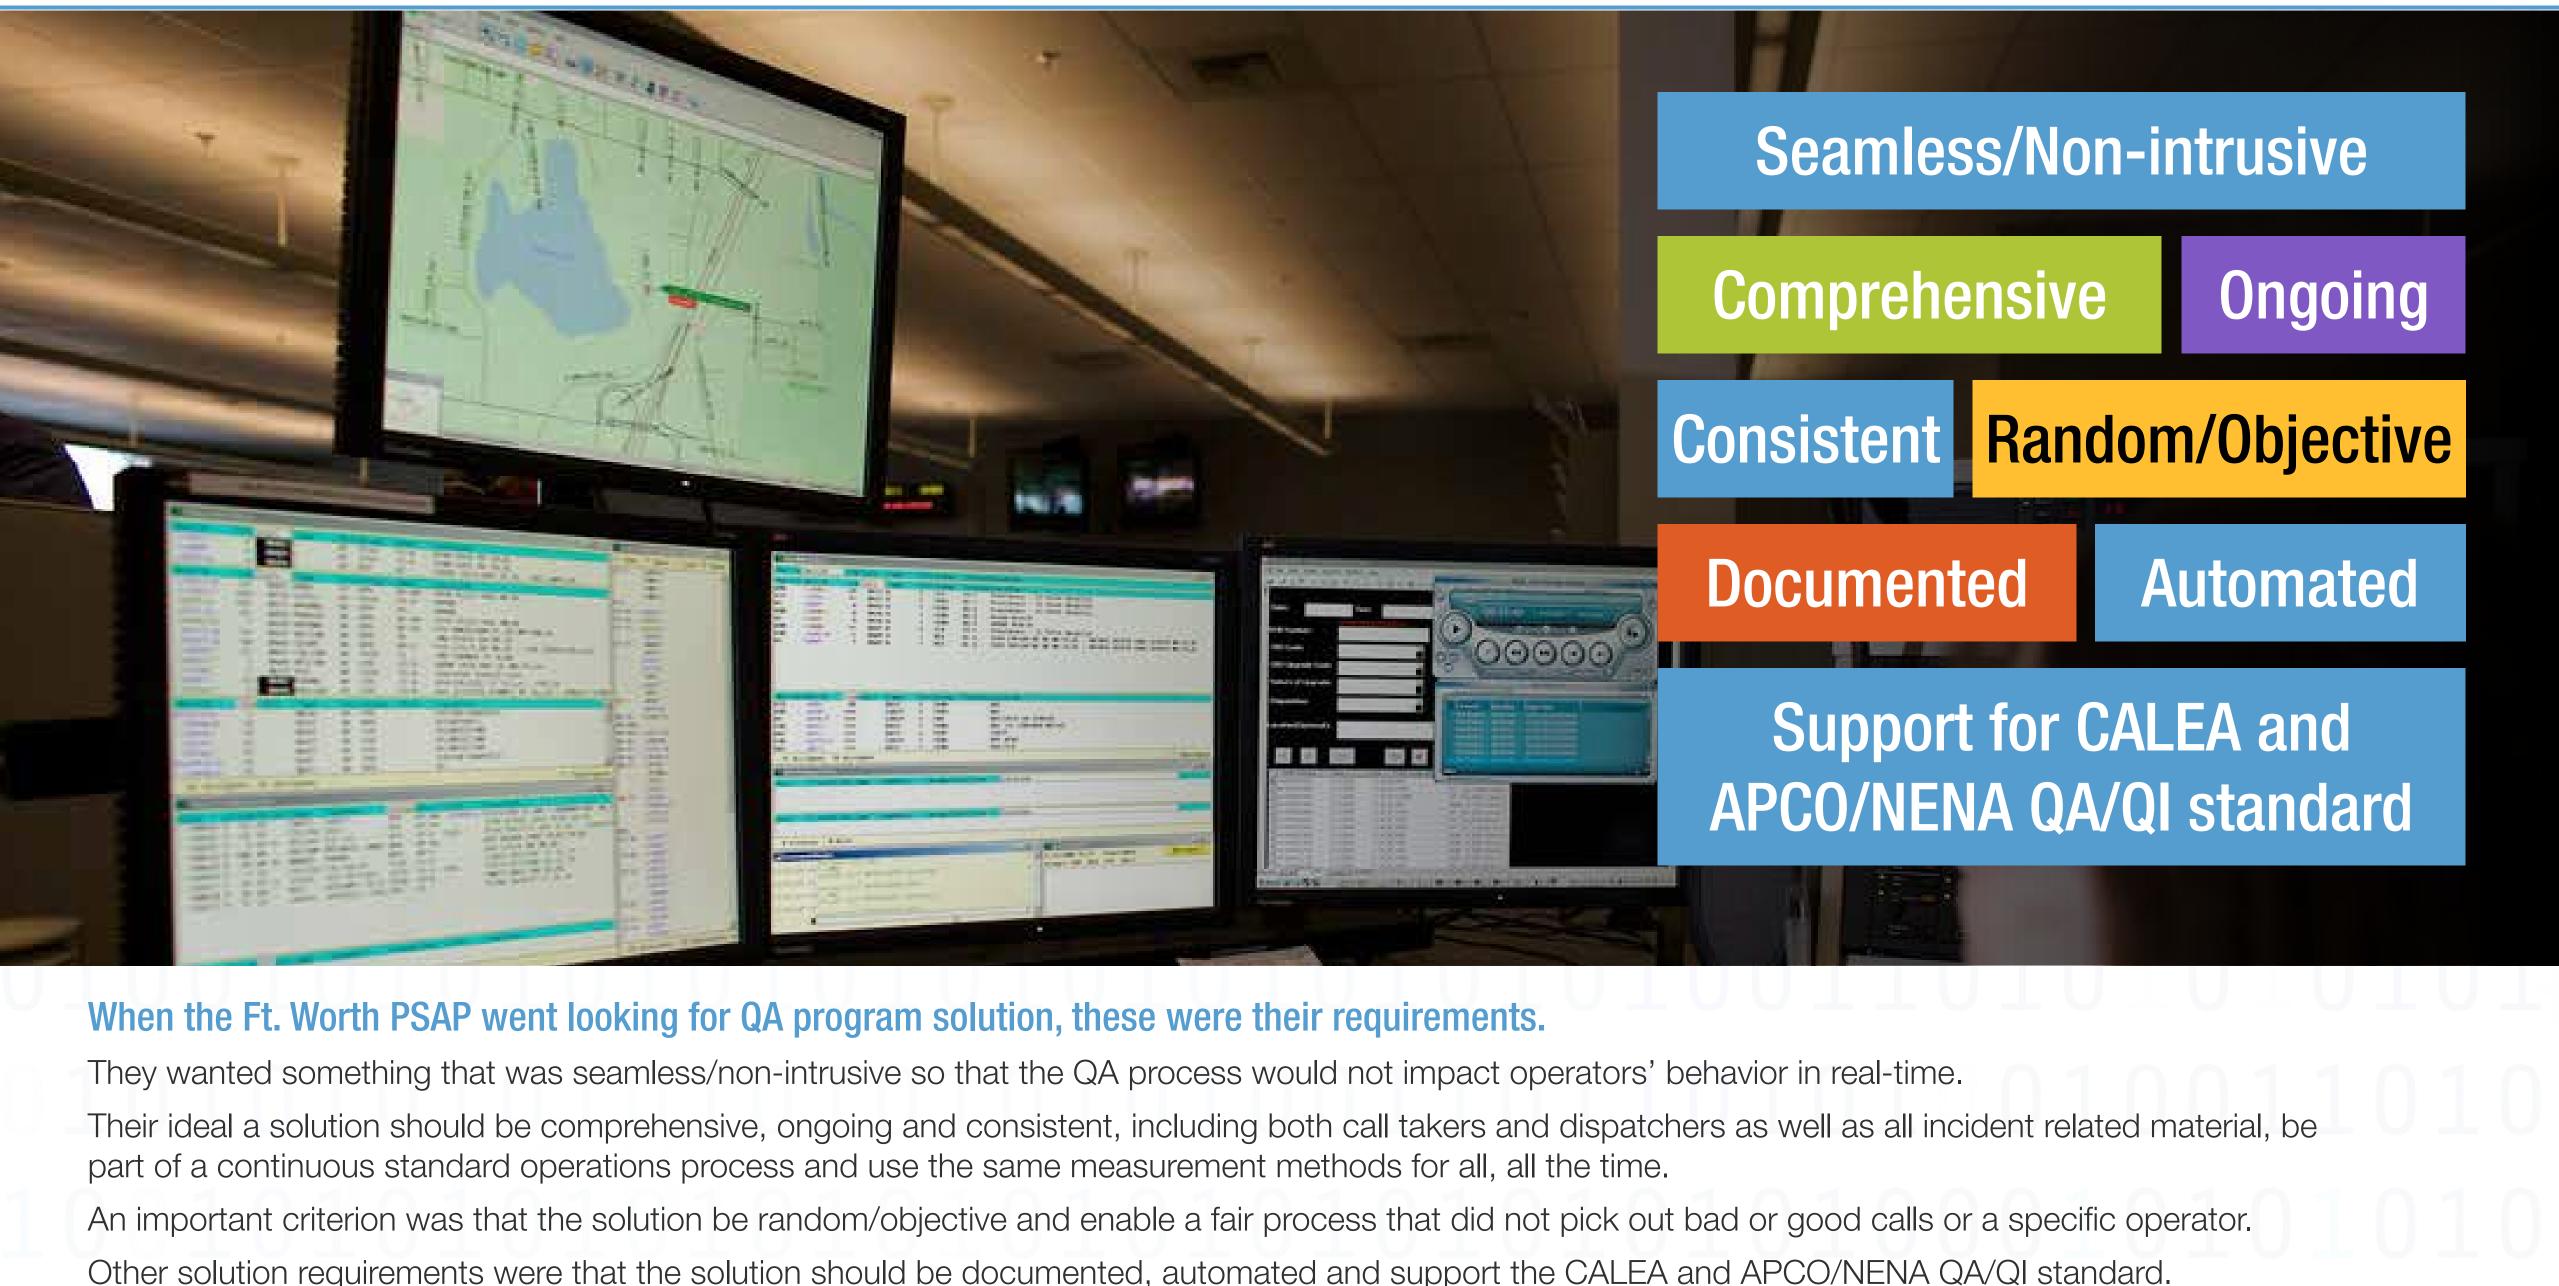

3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 2

QA Program Requirements

4

Other solution requirements were that the solution should be documented, automated and support the CALEA and APCO/NENA QA/QI standard.

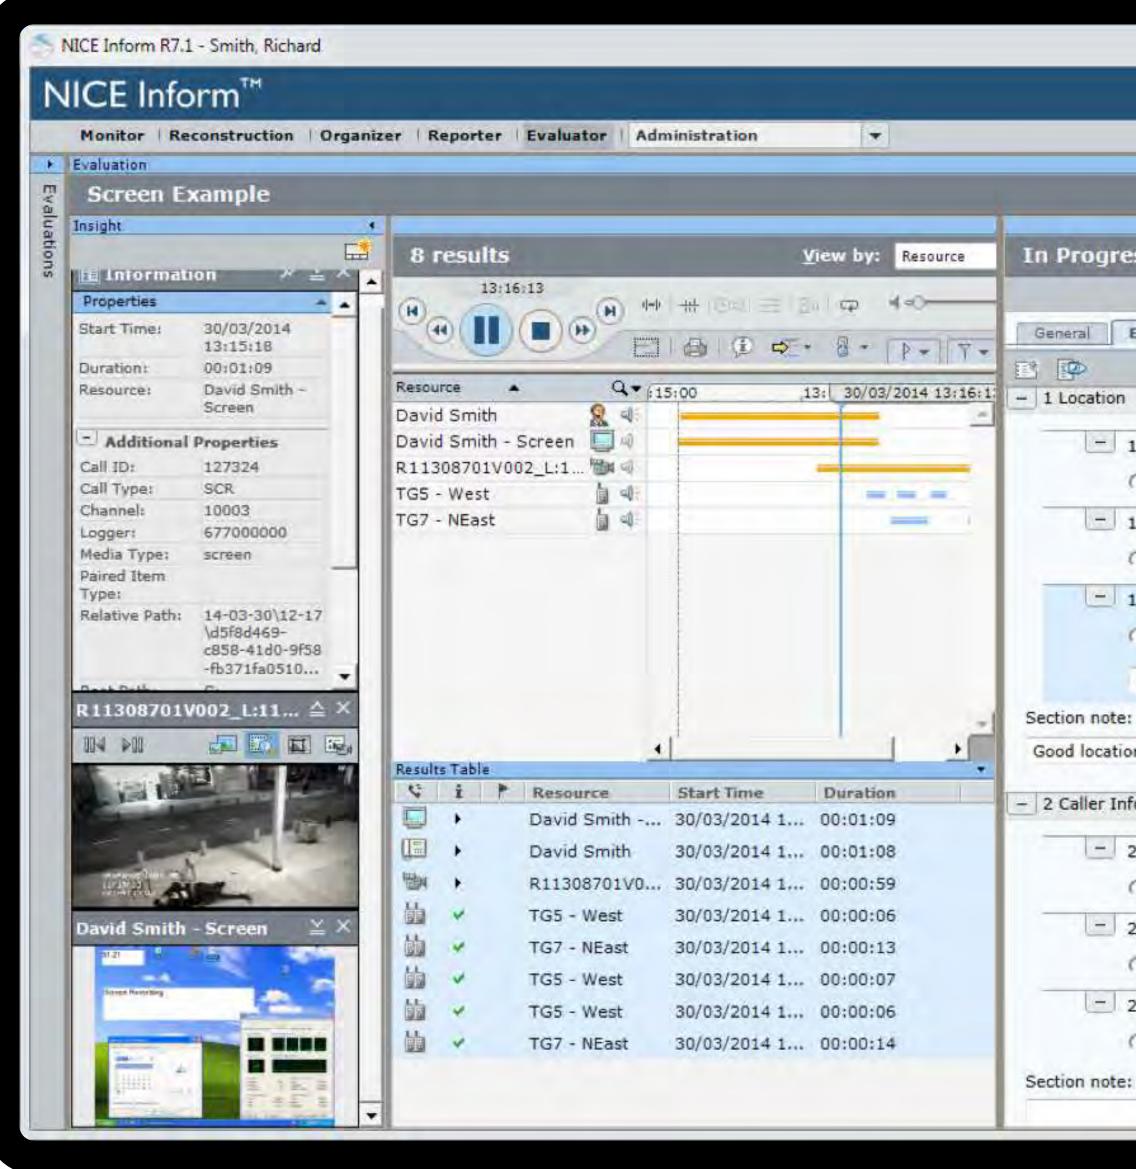

5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30

After looking at the leading products in the market, the Ft. Worth PSAP chose NICE Inform Evaluator as the basis for their automated QA program.

It met all of their criteria including support for the APCO/NENA QA/ QI standard as well as the CALEA Public Safety Communications Accreditation Program which they are working toward. They found Inform QA easy to implement and were able to start benefiting from it right away.

Program Supports Management & Staff

Assistant Managers

5

NICE Inform Evaluator supports both management and staff. The Ft. Worth PSAP supervisors use it to evaluate their teams while their training manager uses it to identify knowledge gaps and training opportunities. It lets their call takers and dispatchers receive and sign off on performance feedback via evaluations, and it provides the Ft. Worth PSAP managers with periodic reports to help them gauge the overall performance of the PSAP and identify actionable issues.

NICE Inform QA at Work

2

NICE Inform QA is the basis of the Ft. Worth automated, continuous and consistent QA Program.

It consists of two primary components: Evaluator and Reporter. NICE Evaluator is used for performance management while NICE **Reporter displays performance results.**

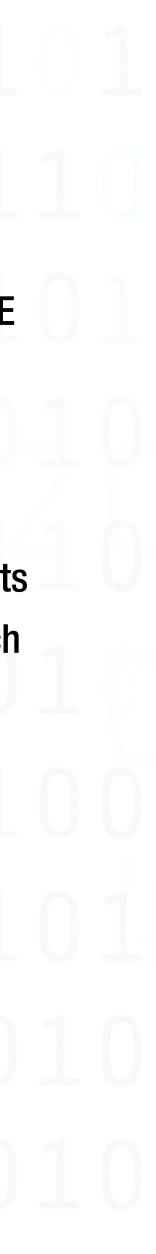

3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30

The Ft. Worth PSAP deployed NICE Evaluator to manage evaluation online including:

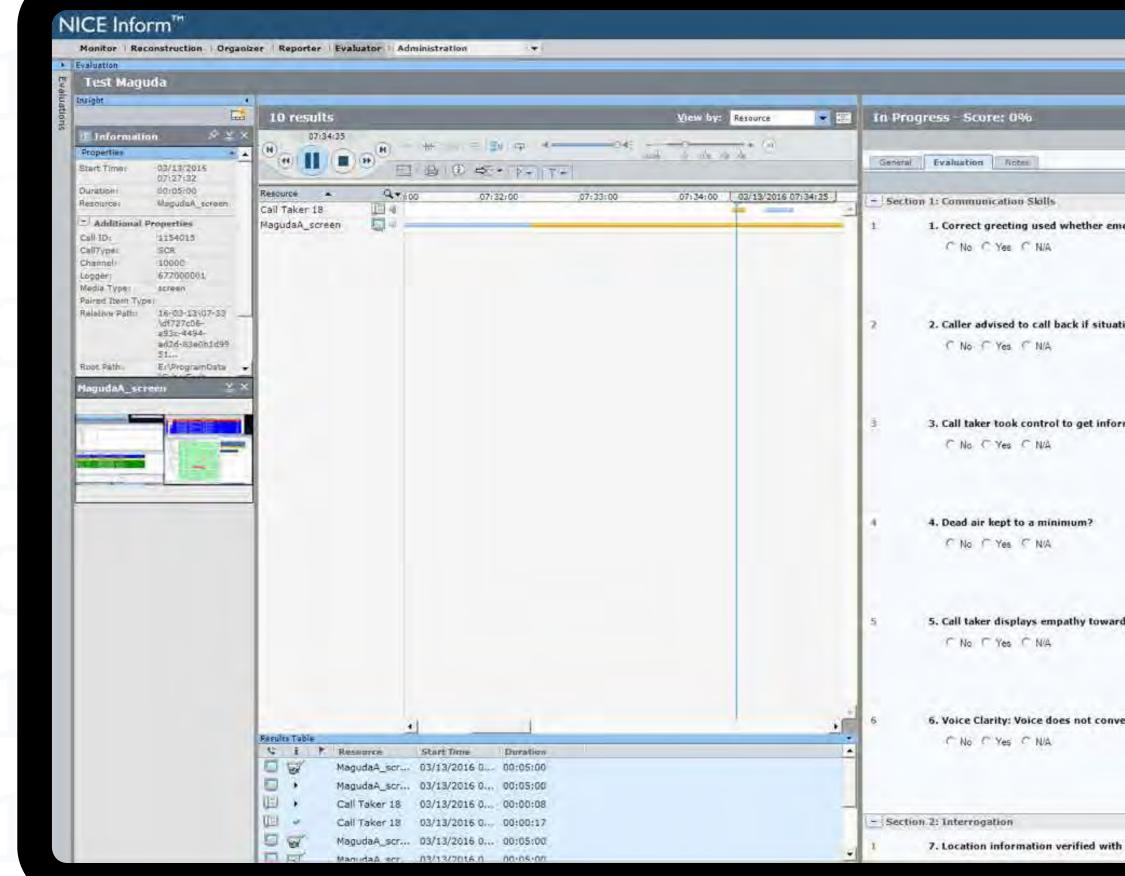

- **1.** Recommending calls for evaluation
- 2. Random scheduling of incidents
- 3. Ensuring specified criteria such as frequency and number of evaluations are met

Introducing NICE Evaluator

Inform Evaluator helps the Ft. Worth PSAP evaluate and improve their incident response performance by identifying performance issues, knowledge gaps and compliance violations. It lets them evaluate a single call or multiple recordings related to one incident.

One of the features they like best is screen recording which allows them to capture what the call taker or dispatcher does on their screens in addition to their voice recordings.

You can see the screen video playback on the bottom left of this screen.

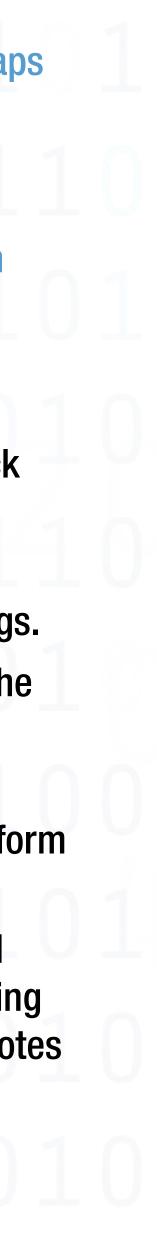

In the top middle is an incident reconstruction with multiple recordings.

In the bottom middle is the result of the search for recordings related to this incident.

And on the far right is the evaluation form with the current score at the top.

Once the form has been filled out and saved, the call taker or dispatcher being evaluated can see it along with any notes that the supervisor puts in.

Screen Recording and Storage

6

5

2

3

Recording screen captures at a rate to allow near real-time playback creates some large data files. Storage media for servers is relatively inexpensive. Plan according to average call volume and staff count during peak time periods to assure that you have sufficient space. Ft. Worth bought 18 terabytes of storage and currently purges its screen recordings after sixty days.

8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30

Reporting

6 7

5

2

З

4

The Ft. Worth PSAP also uses NICE Inform Reporter to review call activity over time per resource, such as staff name, position or radio talkgroup, and per hour of the day. Reports on busiest radios and call duration are also available as well as custom reports. In addition to call volume reports, NICE Reporter offers evaluation reports: number of evaluations by status, average % score per operator, average % score per group, average score per question and scoring trends.

Ft. Worth managers are transitioning from manual reporting using Excel and appreciate the fact that Reporter generates all reports automatically. Any reports can be exported into .csv or xls format when needed.
